

Doing Some Simple Math to Illustrate Bigger Borough Loss in Consolidation

To the Editor:

Consolidating Princeton Borough and Township into one municipality means that the average voter loses voice in municipal affairs. According to the Board of Elections, there are currently 6,491 voters in the Borough and 11,357 in the Township. As the following inequality demonstrates that:

The number 1 divided by 6,491 is greater than 1 divided by 11,357, which is greater than 1 divided by 17,848.

Both the Borough voter and the Township voter lose in a consolidated municipality, but the Borough's voter's loss is greater.
